

DOUBLE SHANK BALL MS-20663

The TUF-GRIP Double Shank Ball can be swaged at the end of your wire rope or at any point along your assembly. If you install at any such point, please indicate the point along the assembly with a sketch when you order. Our Double Shank Ball is made according to MIL-DTL-781 specifications and is built with grade 303Se or 305 stainless steel. We will measure the length of the assembly to the center of the ball unless you specify otherwise. Custom designs are available upon request.
